

AMF Radaray Plus Foul Detector Conversion \$199.50

#400272

Replaces all problem parts: e.g. New Transformer, New Sensors & Main PC Board.

Cost Effective: the new ZOT parts will run 'trouble-free' for the next 20-years.

All Modular Design: all individual components simply plug into the PC Board, making troubleshooting and replacing parts easy.

Self Diagnostics: ZOT's microprocessor automatically checks the sensors every time a foul occurs and the unit will turn itself off automatically, one lane at a time, if it detects a problem.

Alignment Indication: a 4-unit LED system indicates signal strength, assisting the installer and/or mechanic in aligning the sensors.

Light Source Recognition: ZOT's infrared design features a special operational frequency for its emitter and receiver communications. Matching this frequency eliminates being affected by alternate light sources, e.g. overhead and cosmic/glow lighting.

Vibration Protection: The PC Board is mounted on a shock-absorbing buffer that minimizes ball-impact vibration that can damage delicate circuitry common to PC Boards.
